Needle Less Working Environment Promotion

There are lots of innovative and practical methods to adopt in order to promote the needle less working environment. It included needle less access IV block, IV catheter with safety protective device, closed blood collection system with protective devices, IV line tubing with luer fit IV access port, blunt needle for medication mixing, Spike for IV fluid bag aspiration...etc. However, it is very important that frontlines staff should take the initial move and with knowledge of that so that promotion can be commenced from the frontline working colleagues.

OK Practice ?

PMC membership

“You are cordially invited to join us as a member, to enjoy a special discount in course fee and company products. Application form can be downloaded through our web.”

Professional Training Courses coming....

Professional Training is one of our major role play for our professional clients; it was run with major success previously either self running or in collaboration with other organization or society. Some new program like Wound Management Course, Pre-hospital Trauma Nursing Care Course, Emergency Transport and more will be organized in the near coming future, with different societies. Please frequently visit our web to update training information and registered for them if interested. Besides, feel free to let us know if any program that interest you or you would like to attend, so that we will seek opportunity to organize for you.

Avian influenza News Update

內地證實 03 年有人染禽流

China confirmed a human case of H5N1 dating back to November 2003--- 24-year-old member of the military service based in Beijing. Symptoms on 25 November 2003 ; hospitalized with pneumonia in Beijing; deteriorated rapidly and died of severe respiratory disease on 3 December 2003. Retrospective confirmation of the case brings the cumulative total in China to 20. Of these cases, 13 have been fatal. (CFR~65%)

印尼再有人疑染禽流感死亡

Indonesia confirmed her 56th case of human infection with the H5N1--17-year-old female from Jakarta Province; symptoms on 28/7, hospitalized on 4/8, and died on 8/8. Of the 56 cases confirmed, 44 were fatal. (CFR~79%)

Cum. no of H5N1 affected since 2003: 10 countries / 236 people / 138 died / CFR-58%

update from Reference Source: WHO web page

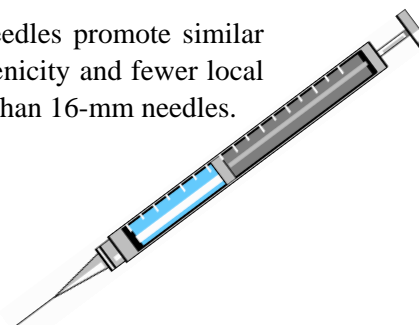

What size of needles should we use for infant Vaccination?

Longer needles for infant immunizations are associated with fewer local reactions but similar efficacy as shorter needles

It was recommended to use of 25-mm needles for the vaccination of infants.

Study in infants demonstrates that

25-mm needles promote similar immunogenicity and fewer local reactions than 16-mm needles.

"I think education is power. I think that being able to communicate with people is power. One of my main goals on the planet is to encourage people to empower themselves."

HK Leader of IV cannulation Simulator Training

“Premier Bionics Limited (PBI) today announced their wholly owned subsidiary, Medic Vision Pty Limited, has made an important breakthrough in the Hong Kong market with the sale of a simulator for training nurses, doctors and paramedics in intravenous techniques. The company said Medic Vision has sold its first intravenous cannulation simulator to the Professional Medical Centre, an education agency that trains all tiers of health professionals throughout Hong Kong. Managing director Mr Ross Horley said the sale of the simulator to The Professional Medical Centre represented an important breakthrough in a large potential market covering nursing, paramedics and doctor training.”
